

## Lens Locking Kit Instructions

For applications affected by strong vibration it is recommended to use this lens locking kit.

1. After assembling the lens to the body of the Matrix 400™ reader, apply two Lens Locking Stickers to the base of the lens so that they cover both the Matrix 400™ body (blue) and the lens body (silver).

Once in place, rub them firmly to assure good adhesion.

2. Mount the internal illuminator (if used), and complete the installation and focus procedures as described in the Quick Guide and Reference Manual.

3. After tightening the Focus and Diaphragm Locking Knobs, apply the O-ring across them.

4. Replace the lens cover, screwing it tightly to the base, then complete the calibration procedures.
